

# Conditional query with multiple values

```
<Request method="GET">
  <Sql id="user" type="query" when="$authType eq 'normal'">
    SELECT * FROM account WHERE emailUsers=$email
  </Sql>
  <Sql id="googleUser" type="query" when="$authType eq 'google'">
    SELECT * FROM account WHERE emailUsers=$email
  </Sql>
  <Sql id="linkedinUser" type="query" when="$authType eq 'linkedin'">
    SELECT * FROM account WHERE emailUsers=$email
  </Sql>
  <Sql id="twitterUser" type="query" when="$authType eq 'twitter'">
    SELECT * FROM account WHERE emailUsers=$email
  </Sql>
  <Sql id="facebookUser" type="query" when="$authType eq 'facebook'">
    SELECT * FROM account WHERE emailUsers=$email
  </Sql>
</Request>
```

The above request can be written as

```
<Request method="GET">
  <Sql id="user" type="query" when="$authType eq 'normal'">
    SELECT * FROM account WHERE emailUsers=$email
  </Sql>
</Request>
```
